

IT911now.com Data Recovery Solutions

Proven Data Recovering Technology:

Top-notch data security and data integrity, and a unique pass phrase recovery system

All file data is stored encrypted on disk and is doubly-encrypted while in transit. We cannot access your encryption key/data under any circumstances. We have sophisticated measures to continually guard against and repair silent data corruption.

Plan D: (Disaster Recovery Solution) includes:

- **Backup Copy:** Creating a copy of everything- Systems, applications, services, data
- **Replication:** Duplicating your backups to another location ensures that you can access them, even if your local versions are destroyed.
- **Management:** Taking control of your backups ensures they'll work when you need them and won't eat up your precious storage space.
- **Recovery:** Getting your business running again immediately following a disaster.
